Content with a purpose

A portfolio for the Magnuson Center Student Social Media Content Creator role

Not a library of old posts. A transition story.

Social media | Strategy | Growth | Storytelling

The goal decides the content.

A creator page, an ecommerce brand, a local game zone, and a university entrepreneurship center should not post for the same reason.

Creator page

Attention, followers,
monetization

Different job.
Different strategy.

Ecommerce

Trust, product
discovery, sales

Different job.
Different strategy.

Local venue

Nearby customers
and visits

Different job.
Different strategy.

Magnuson

Awareness,
confidence,
participation

Different job.
Different strategy.

I do not start with: What should we post?

I start with: What does this organization need students to understand, feel, or do?

The path is not random. Each experience trained a different muscle.

01 Attention

Fashion and lifestyle pages taught me what makes people stop, comment, save, and follow.

02 Analytics

@digitalysh turned content into measurable signals: reach, follows, profile visits, website clicks.

03 Business outcomes

Peter Field and Patlun connected social content to ecommerce, customers, and product positioning.

04 Audience strategy

Fun Strike taught me that local reach and partnerships can matter more than broad views.

05 Magnuson application

For Magnuson, the work becomes student confidence, program clarity, event participation, and founder community.

I learned by publishing first.

Across earlier fashion and lifestyle pages, I created roughly 3,000 posts and managed comments, DMs, and audience interactions. The accounts were later sold, so the complete analytics archive is no longer available.

~3,000

pieces of content

Replies

comments + DMs

Hooks

tested through
fashion

The lesson: attention is earned through pattern recognition, hooks, taste, and conversation.

@digitalysh taught me that content is not just visual. It leaves signals.

23.1K

followers
documented

230K

accounts
reached

42.5K

content
interactions

A strong post is not only a view count. It can move someone from content to profile visit, follow, and website click.

That thinking matters at Magnuson because the content should create a next step: attend, ask, apply, register, or start a conversation.

Founder's Fuel tested a harder question: can a fresh account reach non-followers?

32,205

views

26,759

accounts reached

99.8%

views from non-followers

434

saves

314

sends

1,301

interactions

The honest lesson: distribution is powerful, but distribution is not the same as community. Magnuson needs both attention and belonging.

Peter Field and Patlun connected content to commerce.

Here, the objective was not abstract popularity. It was product discovery, trust, positioning, conversion, and repeat customers.

Peter Field

Co-founded and scaled a men's fashion ecommerce venture to INR 3.5 Cr revenue and 100,000+ units sold.

Patlun

Worked on ecommerce product decisions, marketing campaigns, assortment, and customer behavior insights.

Takeaway for Magnuson: I can separate “content that gets attention” from “content that serves the organization’s real outcome.”

Fun Strike was strategy work, not content ownership.

My role was consulting: help shape the digital team, identify the right audience, and recommend collaborations that could bring local customers into a physical game zone.

Problem	Low traction from normal posting.
Audience	Local families, students, creators, community groups.
Strategy	Surat-based influencers, daily vloggers, community figures, cross-posting.
Reason	A game zone does not need distant views. It needs nearby people who may visit.

This matters because Magnuson also needs strategy by objective, not one-size-fits-all posting.

What I contributed

Collaboration model
Influencer locality logic
Discount-for-content idea
Selective paid creators
Community-channel reach

Strategy still needs taste on the screen.

The portfolio should show that I can think strategically and still produce polished visual assets when the work calls for it.

Armaan Textile: business-facing campaign graphics and brand communication.

AR2: a small friend-brand logo/poster project, included as design proof rather than a full campaign.

Magnuson's content job is different.

Magnuson serves Dartmouth students, alumni, faculty, and staff across the entrepreneurial journey through hands-on learning, mentorship, events, and resources.

Make it visible

Students should see real people building real things.

Make it understandable

Programs, grants, office hours, and events should feel clear.

Make it approachable

Students with only an abstract interest should still feel invited.

Make it actionable

Content should lead to a next step: attend, apply, ask, join.

So the question is not: Can this post go viral?

The question is: Does this post move a Dartmouth student closer to entrepreneurship?

Many students do not need more announcements. They need a first step.

Entrepreneurship can feel intimidating when students do not know who belongs, where to start, what programs mean, or what failure looks like in real life.

Fear

“I do not have a real idea yet.”

Confusion

“What is a Founder Grant, Venture Studio, or office hour?”

Distance

“Are people like me actually building here?”

Inaction

“I will think about it later.”

Content can lower the barrier.

Show the
process.
Explain the entry
points.
Make builders
relatable.
Make action feel
possible.

A repeatable system around four content pillars.

Founder Stories

What are you building? What problem are you solving? What surprised you?

What I Got Wrong

Short failure/learning posts that make entrepreneurship feel human.

How It Works

Simple explainers for grants, office hours, accelerators, events, and applications.

In the Room

Event recaps, pitch practice, behind-the-scenes, whiteboards, and student conversations.

Each pillar serves a purpose: reduce fear, clarify programs, celebrate community, and convert attention into participation.

Test formats. Learn quickly.

The first month should create enough evidence to learn what students actually respond to.

EXPERIMENT 01

Founder story Reel

Hypothesis: students save/share real builder stories more than generic announcements.

Measure: retention, saves, shares, profile visits.

EXPERIMENT 02

Grant or program explainer

Hypothesis: simpler entry-point content increases DMs, clicks, and application intent.

Measure: saves, link clicks, DMs, profile actions.

EXPERIMENT 03

Event recap / in the room

Hypothesis: behind-the-scenes content builds FOMO and belonging.

Measure: shares, comments, RSVPs, repeat engagement.

Success is not only followers. It is useful attention: saves, shares, DMs, profile visits, event interest, and program action.

A sample Magnuson post will make the strategy tangible.

Once the event or program is selected, I will turn it into a finished post mockup that shows visual style, copy angle, and student-facing clarity.

- Visual** One clean branded graphic, not a busy collage.
- Hook** A first line that answers why a student should care.
- CTA** A simple action: register, apply, DM, visit, or attend.

This slide is intentionally left as a live slot for your chosen recent Magnuson event/program.

What I can bring to Magnuson

Not just posts. A way of thinking.

I can earn attention without worshipping views.

I can connect content to the real organizational goal.

I can make entrepreneurship feel less intimidating.

I can test, measure, and improve formats over time.

I can turn real student-founder moments into stories students want to watch and share.
